

INGENIX®

Claredi® Classic

The industry-leading X12 4010A1 and 5010 testing and certification solution

Claredi Classic economically tests and certifies trading partners for:

- All HIPAA-mandated 4010A1 transactions and many others
- All HIPAA-mandated 5010 transactions and many others

Executive Summary

Built on a transaction validation engine created specifically for health care EDI, especially for HIPAA, Claredi Classic was the first comprehensive HIPAA testing solution for those interested in an economical solution to pre-production transaction testing and certification.

- **Test all HIPAA-mandated 4010A1 and 5010 transactions, and many others**
- **Use our new 5010 Gap Analysis reports to help you determine changes you need to make to your 4010A1 transactions to comply with 5010**
- **Cost-effective: An affordable, web-based service that significantly reduces expenses of system testing and bringing new submitters online through pre-certification**
- **Comprehensive: Edits to all seven WEDI types, every HIPAA transaction, every version, and over 70 code sets**
- **High-performance: built on a HIPAA-specific EDI analysis engine for unparalleled speed**

Overview

Since 2001, Claredi Classic has been a leading HIPAA testing and certification solution used by over 3,500 health care organizations of all types and sizes to achieve HIPAA 4010A1 transaction compliance. As systems change and with the new HIPAA 5010 version coming soon, the need remains for an inexpensive yet thorough solution to help keep your EDI moving smoothly between trading partners.

Cost-effective

When you ask trading partners to test and certify with Claredi Classic in advance of sending transactions to your system, you can have the confidence that they have submitted to thorough scrutiny. More than simply HIPAA standards, we also edit for payer companion documents and specific business requirements. You don't have to utilize your resources to get them up to speed. When they have certified they are ready to do business. When the standards change or a submitter's system changes as they continue to test and certify with Claredi Classic, you can expect a high degree of continued success in exchanging clean and compliant transactions.

Comprehensive

Claredi Classic provides comprehensive HIPAA transaction set testing. It analyzes your 4010A1 and 5010 transactions against all seven WEDI-SNIP types of recommended testing, validates them against more than 70 continually maintained code sets, and tests them against more than 1,000 payer companion guides (if yours is not one of them, it can be – at no cost.) We also test against a thorough set of common sense business edits that have been developed in conjunction with the industry's foremost health care EDI experts. With regular testing, Claredi Classic helps facilitate the proper exchange of your production EDI transactions.

High-Performance

Our validation is built around Velocedi®, an EDI analysis engine developed specifically for HIPAA. Because it was built exclusively for health care, it has unparalleled speed and accuracy as it takes into account the unique requirements of health care EDI which are not found in other industries.

Easy to use and understand

Testing transactions with Claredi Classic is made simple with our intuitive, browser-based interface. The process is literally point-and-click simple. Whether you have expert EDI analysts or non-technical staff the several types of reports available are geared to the user's knowledge level. Business analysts can obtain plain-English insight into issues that are relevant to them, while more technically oriented EDI staff can see exactly where the problems are, so they can remedy the transaction or adjust their systems as needed.

And with our new 5010 Gap Analysis reports, you can easily determine changes you need to make to your 4010A1 transactions to comply with 5010.

Key Features

For pre-production testing, this is the most complete, cost-effective solution available.

- Test all HIPAA-mandated 4010A1 and 5010 transactions and many others.
- Use our new 5010 Gap Analysis reports to help you determine changes you need to make to your 4010A1 transactions to comply with 5010.
- Test all seven types of WEDI-SNIP recommended testing and over 70 continually updated code sets and provides "HIPAA", "Business", "Warning", and "Payer" companion guide edits.
- Intuitive web browser-based user interface for easy, efficient testing and certification.
- Pre-qualify trading partners as they test against your companion document, your requirements built to your specifications.
- Receive a full range of reports in plain English for non-technical staff and business analysts, or "as technical as you want it" reporting for EDI analysts.
- Access the system for an entire year to accommodate system upgrades or the release of updated standards, through an inexpensive annual subscription.
- Web-based service is maintenance free— you don't have to install updates or buy/maintain hardware because we do it for you.

Ingenix Claredi Classic is an extraordinarily versatile tool for pre-production transaction testing that significantly benefits your trading partners as they prepare for submission of production transactions.

Full Production Validation and Provider Community Testing Portals

If you have the need for continuous, automated X12 validation system, Ingenix provides a number of solutions that have been designed for demanding production environments including Faciledi, TransactionManager and Connectivity Director. If you are interested in setting up a portal, either co-branded or private labeled, Ingenix Communededi can help your trading partners test extensively prior to coming into production.

Call us at 1-800-765-6034 or email ingenuity@ingenix.com and one of our connectivity solution specialists will be happy to assist you in developing the exact system to meet your specific needs.
